

Zhao Qiaochu

Front-End Engineer | Beijing | 181 8647 3895 | c9cu@qq.com | <https://github.com/zqcccc>

PROFESSIONAL SUMMARY

AI Application Engineering: 6+ years in front-end and full-stack engineering, focused on AI products for the last 3 years. As the primary developer, led end-to-end R&D of an AI content-creation SaaS with the highest individual commit volume on the team; built an LLM multi-model routing layer with automatic fallback on auth failure; contributed to an Agent platform's secondary development, owning Data Square (dataset → knowledge base) from 0 to 1 and MCP tool integration.

End-to-End Full-Stack Delivery: React / Next.js / TypeScript front-end with Node / Go services and PostgreSQL / MySQL / Redis; independently owns Docker multi-container (Web / Worker) deployment and CI/CD. Recently delivered a WeChat mini-program plus Go backend (leading a Java → Go rewrite through production cutover) and a React admin console solo, covering payment, refund, and inventory end to end.

AI-Driven Efficiency: Cursor / Claude as the core development workflow, backed by Node / Python automation. Used Babel AST parsing to batch-extract and replace multilingual copy, cutting the i18n cycle by one week; optimized CRA / Webpack builds for 30%+ faster rebuilds; drove TypeScript adoption, reducing JS error rates on key pages below 0.02%.

WORK EXPERIENCE

Lanyun Technology Group Co., Ltd.

2025.06 - 2026.06

Front-End Engineer

- **Agent Platform Development:** Secondary development on Bisheng: owned Data Square from 0 to 1 (dataset retrieval, recursive category filtering, detail view, knowledge-base synthesis and dataset-to-QA import), tenant management (create / list / delete / batch registration), MCP tool onboarding and grouping, plus branding replacement and mobile adaptation of the login page.
- **AI Content-Creation SaaS (Primary Developer):** Led end-to-end front-end and back-end R&D with AI-assisted coding as the core workflow, ranking first on the team by commit volume; covered multi-platform content generation (WeChat / Xiaohongshu / Douyin / Bilibili), batch task scheduling, a Slate.js rich-text editor, AI image generation, brand glossary, and knowledge base.
- **LLM Scheduling & Task Reliability:** Built a multi-model routing layer with streaming output and automatic fallback on auth failure; used BullMQ parent-child task queues with Redis heartbeat and crash auto-recovery to keep large-scale generation jobs running.
- **Engineering & Delivery:** Designed and maintained a Docker multi-container architecture (isolated Web / Worker containers) with layered build caching; independently built the Xiaohongshu mini-program, completing the web-to-mini-program publishing pipeline.

Front-End Engineer

- **Core Product Iteration:** Key contributor to front-end R&D for AI social products (Xiaoice Island / X Eva / Chararu), covering mini-programs, H5, in-app modules and Uniapp hot-update bundles, serving over one million users; 450+ personal commits in the core repository.
- **Multi-Platform Mini-Program Matrix:** Owned the Xiaoice Island / X Eva multi-platform mini-program family (WeChat, Douyin, etc.) and in-app Uniapp hot-update bundles; led continuous iteration of 4+ mini-programs and 10+ web pages, supporting the international build for overseas release.
- **Operations Console (Full-Stack):** Independently delivered both the operations-console front-end and its Node API, powering campaign configuration and data operations.
- **Engineering Efficiency:** Led optimization of the Mac packaging plugin, shortening each release cycle by 30%; during Chararu's internationalization, used Babel to parse the source AST, batch-extract and replace Japanese copy, and wrote automation scripts for multilingual content replacement, cutting the i18n development cycle by one week.
- **Cross-Platform Capability:** Independently completed Apple Sign-In + IAP payment integration and Arabic/multilingual i18n adaptation for H5_XEva, supporting overseas market expansion.
- **Cross-End Collaboration:** Designed and co-built common function interfaces with the client team, standardizing similar features and improving development efficiency by 1+ day.
- **Chrome Extension Exploration:** An internal tech-exploration project—developed an AI voice-conversation Chrome extension based on Manifest V3 + React, integrating the Azure Cognitive Services SDK for real-time ASR and TTS, combined with Live2D virtual avatar real-time rendering for an immersive, voice-driven AI social experience.

Beijing Milaiwei Network Technology Co., Ltd. (Inke)

2020.11 - 2021.11

Front-End Engineer

- **High-Traffic H5 Development:** Owned in-app H5 feature and campaign pages for the Inke app, with 24 business entries under my name (Guard, Blind Box, Family Expedition, PK Records, Black-Gold Club, Card Collection, etc.), totaling 800K+ daily PV.
- **Cross-End Mobile Development:** Contributed to the React Native cross-platform project (IKRNBundle), independently delivering the task-center module with iOS/Android reuse, and working on RN hot-update and bundle release flows.
- **Architecture & Experience Optimization:** Optimized the CRA-based React architecture and Webpack config (multi-entry builds, prerendering, dev-server proxying) for 30%+ faster rebuilds; built a shared component library, raising similar-requirement efficiency by 1+ person-day.
- **Reliability & TypeScript Adoption:** Built and promoted the team's TS environment from scratch and refactored core utilities, reducing JS error rates on key pages below 0.02%; owned the payment front-end (pay.busi.inke.com) with ARMS monitoring and alert-noise filtering.

PROJECT EXPERIENCE

Ski Mini-Program (WeChat Mini-Program + Go Backend + React Console)

2026.05 - Present

Launched (pre-promotion) · Personal full-stack project

Tech Stack: WeChat Mini-Program (native + TypeScript) · Go (chi / GORM / MySQL) · React 19 + TanStack Router · Docker · Playwright

- Self-initiated and solo-delivered ski product: mini-program + Go backend + React admin console, live in production (carpool / room-share / second-hand ticket lines).
- **Java → Go Rewrite with Production Cutover:** Led the backend rewrite from Java (SpringMVC + MyBatis) to Go, completing equivalence verification and production cutover with the legacy service kept for rollback.
- **Transactional & Payment Correctness:** Built WeChat payment and refund end to end, mall inventory reservation/release, coupon rollback and order expiry, using conditional state transitions plus transactions for idempotency, with audit logging and CSRF protection.
- **Engineering Quality:** Established ADR decision records and a DB migration system; 240+ console tests plus Playwright E2E, OpenTelemetry tracing, and non-root images passing vulnerability scans.

- Tech Stack: Next.js / Node.js / TypeScript / PostgreSQL / Redis / BullMQ / Drizzle ORM / Vercel AI SDK
- As the primary developer, led end-to-end front-end and back-end R&D of the platform-wide AI content-creation system, ranking first on the team by commit volume (611+ commits).
 - Front-End & Rich Interaction:** Built a Slate.js-based rich-text editor with AI-assisted rewriting, a floating toolbar, local image upload, and drag-and-drop sorting.
 - Server & Model Scheduling:** Built an LLM multi-model routing layer unifying multiple providers, with streaming output and automatic fallback on auth failure (401/403 detection with a cooldown window), plus multi-platform parallel Artifact state management.
 - Back-End Task-Center Design:** Built a batch content-generation system on BullMQ parent-child task queues with Redis heartbeat and crash auto-recovery for large-scale jobs; also delivered scheduled-publishing and GEO-monitoring workers.

- Tech Stack: React / Vue 3 / TypeScript / Uniapp / 小程序多平台
- Key contributor (2 years), leading multiple core modules of Chararu: diary system, game rooms, private rooms, novel game, character dialogue system, notifications, and localization config.
 - Owned the Xiaoice Island / X Eva multi-platform mini-programs and in-app Uniapp hot-update bundles; led continuous iteration of 4+ mini-programs and 10+ web pages, ensuring UX under high concurrency.
 - Completed Apple Sign-In, IAP payment, and Arabic/multilingual i18n adaptation for H5_XEva, supporting overseas expansion.

- Tech Stack: React / TypeScript / React Native / Redux / Webpack / ARMS
- Independently owned 24 business entries of high-concurrency H5 pages (800K+ daily PV), covering Guard, Blind Box, Family, PK, and card-collection gameplay.
 - Contributed to the React Native cross-platform project (IKRNBundle), independently delivering the task-center module with iOS/Android reuse and hot-update release.
 - Drove TS adoption, reducing JS error rate on key pages below 0.02%; optimized Webpack multi-entry builds and prerendering for 30%+ faster rebuilds.

- A VS Code extension independently developed and published to the VS Code Marketplace, with 746+ cumulative downloads.
- Provides commands and shortcuts to quickly insert/remove debugging statements such as console.log and console.error, optimizing the daily front-end debugging workflow.

TECHNICAL SKILLS

Front-End Frameworks: React 18 / Next.js / Vue 3 / Uniapp / Tailwind CSS	Cross-End Development: React Native / WeChat Mini-Program / Douyin Mini-Program / Uniapp hot-update / Chrome Extension
Engineering: TypeScript / Webpack 5 / Vite / Docker / CI-CD / Playwright / OpenTelemetry	Back-End / Data: Node.js / Go / PostgreSQL / MySQL / Redis / GORM / Drizzle ORM / BullMQ
AI Toolchain: Cursor / Claude (AI-assisted coding) · Vercel AI SDK / LLM multi-model routing & fallback / MCP tool integration / RAG knowledge base / Azure Cognitive Services	

EDUCATION
