

Zhao Qiaochu

Front-End Engineer | Beijing | c9cu@qq.com | <https://github.com/zqcccc>

Professional Summary

AI-Driven & Full-Stack Engineering Efficiency: Deeply integrate AI tools (e.g., Cursor, Claude) into the R&D workflow to dramatically boost full-stack delivery efficiency. Proficient in building automation scripts with Node.js and Python, continuously optimizing CI/CD and daily engineering workflows.

Senior Full-Stack Delivery: 6+ years of development experience with deep mastery of the React/Next.js/TypeScript ecosystem, capable of end-to-end independent delivery from front-end interaction to server-side architecture. Familiar with PostgreSQL database design; able to independently own server-side API development, data automation, and high-availability containerized deployment.

Cross-Platform & Multi-End Coverage: Proficient with React/Vue stacks and hands-on experience across React Native, mini-programs (WeChat/ByteDance), and VS Code extensions, capable of independently driving technology selection and full-stack implementation for cross-platform businesses.

Independent Architecture & Visual Implementation: Strong component abstraction and UI implementation skills, proficient with mainstream solutions such as Tailwind CSS. Capable of pixel-perfect Figma implementation; when full design specs are unavailable, adept at using tools like Stitch to drive AI-generated drafts, independently controlling visual details aligned with business goals to push high-fidelity delivery.

DevOps & Containerized Delivery: Proficient in designing and maintaining multi-container deployment architectures (isolated Web/Worker containers), leading CI/CD pipeline construction and automated deployment. Combined with Node.js/Python automation scripts to achieve full-chain automation of build, test, and deployment, with high-availability containerized delivery and operations from dev to production.

Work Experience

Lanyun Technology Group Co., Ltd.

2025.06 - 2026.06

Front-End Engineer

- Initially participated in the secondary development of an AI Agent platform based on Bisheng, responsible for branding replacement, mobile adaptation of the login page, tenant management, Data Square (dataset browsing/retrieval/synthesized knowledge bases), MCP tool integration, and conversation UI optimization (thinking-process display, tool interruption control).
- Later adopted AI-assisted programming as the core development method, leading the front-end core R&D of an AI content-creation SaaS product, personally contributing 220,000+ lines of code changes, covering core modules such as multi-platform content generation (WeChat Official Account, Xiaohongshu, Douyin, video scripts), batch task scheduling, rich-text editor, AI image generation, brand glossary, and knowledge base.
- Independently developed the Xiaohongshu (RED) mini-program, completing the content publishing pipeline from web to mini-program.
- Designed and maintained a multi-container Docker deployment architecture (isolated Web/Worker containers), driving the product's end-to-end delivery from development to production.

Beijing Xiaoice Hongmian Technology Co., Ltd.

2022.01 - 2025.03

Front-End Engineer

- Core Product Iteration:** Key contributor to the front-end R&D of AI social products (Xiaoice X Eva / Chararu), covering mini-programs, H5, and in-app modules, serving over one million users cumulatively.
- Engineering Efficiency:** Led optimization of the Mac packaging plugin, shortening each release cycle by 30%; during Chararu's internationalization, used Babel to parse the source AST, batch-extract and replace Japanese copy, and wrote automation scripts for multilingual content replacement, cutting the i18n development cycle by one week.
- Cross-Platform Capability:** Independently completed Apple Sign-In + IAP payment integration and Arabic/multilingual i18n adaptation for H5_XEva, supporting overseas market expansion.

- **Cross-End Collaboration:** Designed and co-built common function interfaces with the client team, standardizing similar features and improving development efficiency by 1+ day.
- **Chrome Extension Exploration:** An internal tech-exploration project—developed an AI voice-conversation Chrome extension based on Manifest V3 + React, integrating the Azure Cognitive Services SDK for real-time ASR and TTS, combined with Live2D virtual avatar real-time rendering for an immersive, voice-driven AI social experience.

Beijing Milaiwei Network Technology Co., Ltd. (Inke)

2020.11 - 2021.11

Front-End Engineer

- **High-Traffic H5 Development:** Owned development and maintenance of core in-app H5 feature and campaign pages (100+ pages) for the Inke app, with total daily PV exceeding 800K.
- **Cross-End Mobile Development:** Participated in React Native-based cross-platform mobile development, independently delivering the task-center module with iOS/Android dual-end reuse.
- **Architecture & Experience Optimization:** Optimized the CRA-based React project architecture and Webpack configuration, improving rebuild efficiency by 30%+; built a shared component library, raising similar-requirement development efficiency by 1+ person-day.
- **TypeScript Evangelist:** Built and promoted the team's TS development environment from scratch, refactored core utility methods, and reduced JS error rates on key pages to below 0.02%.

Project Experience

Ski Mini-Program (WeChat Mini-Program + Golang Backend)

2026.06 - Present

In development (not yet launched) · Personal project

Tech Stack: WeChat Mini-Program (WXML / WXSS / TypeScript) · Golang (backend API service)

- Self-initiated and independently developed ski-scenario WeChat mini-program, solely responsible for end-to-end full-stack development from 0 to 1, including product definition, front-end (WeChat mini-program), and back-end (Golang).
- Front-end built with the native WeChat mini-program framework for interaction and pages; back-end uses Golang to provide API services, with independent control over front-end/back-end tech selection, API design, and data modeling.
- Currently in the MVP development phase, focusing on core business-flow connectivity and usability validation.

Lanyun Xinghe AI Content-Creation SaaS Platform

2025.09 - 2026.06

<https://xh.lanyun.net>

Tech Stack: Next.js / Node.js / TypeScript / PostgreSQL / Redis / BullMQ / Drizzle ORM / Vercel AI SDK

- Independently led end-to-end front-end and back-end R&D of the platform-wide AI content-creation system, being the top contributor by volume.
- **Front-End & Rich Interaction:** Built a Slate.js-based rich-text editor with AI-assisted rewriting, a floating toolbar, local image upload, and drag-and-drop sorting.
- **Server & Model Scheduling:** Implemented an LLM multi-model routing layer unifying access to models such as Claude Sonnet and ByteDance Doubao Seed, supporting streaming output, automatic fallback, and multi-platform parallel Artifact state management.
- **Back-End Task-Center Design:** Developed a batch content-generation system based on BullMQ parent-child task queues, combined with Redis heartbeat monitoring and crash auto-recovery to ensure stable execution of large-scale automated data tasks.

Xiaoice X Eva / Chararu AI Social Product Matrix

2022.01 - 2025.03

<https://xeva.xiaoice.com/>

Tech Stack: Vue 3 / TypeScript / Uniapp / React

- Key contributor (2 years), leading multiple core modules of Chararu: diary system, game rooms, private rooms, character dialogue system, notifications, and localization config.
- Led continuous iteration of 4+ mini-programs and development of 10+ web pages, ensuring UX under high concurrency.
- Completed Apple Sign-In, IAP payment, and Arabic/multilingual i18n adaptation for H5_XEva, supporting overseas expansion.

Inke App In-App H5 & React Native Core Business

2020.11 - 2021.11

Tech Stack: React / TypeScript / React Native / Redux / React Navigation

- Independently owned development and maintenance of 100+ high-concurrency H5 feature pages (800K+ daily PV).
- Participated in the React Native cross-platform project (IKRNBundle), independently delivering the task-center module with iOS/Android reuse.
- Drove TS adoption, reducing JS error rate on key pages below 0.02%; optimized Webpack, improving rebuild efficiency by 30%+.

vscode-js-console (VS Code Extension)

Personal project

<https://marketplace.visualstudio.com/items?itemName=zqccccc.vscode-js-console>

- A VS Code extension independently developed and published to the VS Code Marketplace, with 746+ cumulative downloads.
- Provides commands and shortcuts to quickly insert/remove debugging statements such as console.log and console.error, optimizing the daily front-end debugging workflow.

Technical Skills

Front-End Frameworks: React 18 / Next.js / Vue 3 / Uniapp

Cross-End Development: React Native / WeChat Mini-Program / Douyin Mini-Program / Chrome Extension / VS

Code Extension

Engineering: TypeScript / Webpack 5 / Vite / Tailwind CSS / Docker / Playwright

Back-End / Data: Node.js / Golang / PostgreSQL / Redis / Drizzle ORM / BullMQ

AI Toolchain: Cursor / Claude (AI-assisted coding) · Vercel AI SDK / LLM multi-model routing / Azure Cognitive Services

Education

Wuchang Shouyi University

Full-time bachelor's degree (national unified enrollment)

2015 - 2019
